

Homemade Spray Starch

You can also make your own homemade spray starch with Argo and water. To do so,

1. Mix 1/4 c. Argo corn starch into 1/2 c. cold water
2. Stir in 4 c. of boiling water
3. Mix and cool

Put either mixture into a spray bottle labeled with your recipe and "Shake before using!" so that you don't forget.

Both mixtures can 'gunk up' the nozzle. Use hot water to clean it. You may need to replace bottles periodically.
